## PROFILE

I am an aspiring full-stack developer specializing in JavaScript, with a focus on creating dynamic, responsive, and accessible applications. In addition to my regular courses, I am involved in a voluntary program aimed at developing networks and gaining professional experience, where I contribute by building connections and organizing study visits and conferences. I am a solution-oriented team player and enjoy programming, where every challenge is an opportunity to grow. I look forward to gaining more hands-on experience, contributing to real-world projects, and continuing to develop in a professional environment.

## EDUCATION

### Full-stack developer JavaScript

Chas Academy | 2024-2026

The program places strong emphasis on technologies that are relevant in today's market. Collaboration is also a central part of the education, as we primarily work in teams.

- In-depth knowledge of JavaScript, React.js, and Node.js.
- Experience with modern development practices such as Git, CI/CD, and agile methodologies.
- Hands-on application of full-stack development through projects and internship (LIA).

### Course, Programming 2

Komvux Malmö | 2024

Object-Oriented Programming with Python:  
Focus on classes, objects, inheritance, encapsulation, and polymorphism.

### Course, Programming 1

Komvux Malmö | 2023

Structured Problem Solving in Java:  
Programming in text-based languages using an IDE, version control, error handling, code quality, user interfaces, and social aspects.
